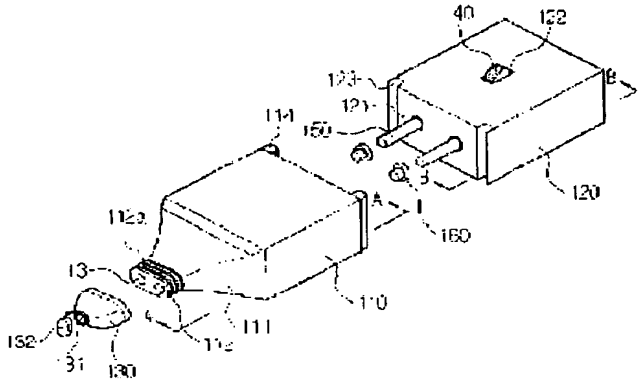
(54) Title: DEVICE FOR EXTRACTING PASTE CONTENTS



(57) Abstract: Disclosed is a device for extracting paste contents. The device includes a storing unit for individually storing at least one paste content therein in order to extract the paste content to an exterior and a pushing unit for pushing the paste content stored in the storing unit. The pushing unit is detachably coupled with the storing unit. The storing unit is formed at an inner portion thereof with at least one storing cavity for individually storing the paste content. An exhaust port is formed at a front end of the storing cavity in order to exhaust the paste content and an injection port is formed at a rear end of the storing cavity for injecting the paste content into the storing cavity. Thus, paste contents, such as toothpaste, are easily extracted from the device. A connector is coupled to a paste content exhaust section of the device.
